

Stop
having problems
with your **keys**

New Electronic Key Management System

Control your keys and register all the events. The system gives a report of events; you can print it and / or export it.

The system stores, controls and records the withdrawal, distribution and return of keys and other objects.

The administrator can give users access to all keys or limit access to certain keys.
Different sizes to suit your needs.

Stop wasting time! Boost Productivity, Accountability and Success in your organization. More performance. More functions. More control!

Register electronically, in real time, withdrawal and return of the keys.

System Access: PIN, card, PIN and card.

Blocks user access to unauthorized keys.
Alerts and alarms by email SMS in case of incidents.

You can make inquiries about the history of the keys and enter incidences of them from the keypad. The software allows you to create different access levels: administrator, supervisor, user etc.

User's access can also be done by time zones; users can access the system all time or at certain times of the day only.

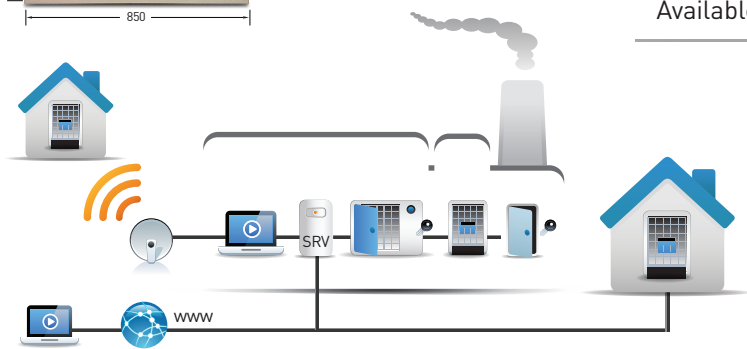

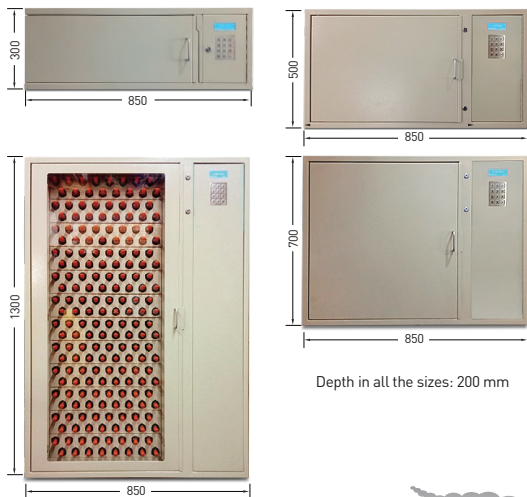

The cabinet is autonomous, no need to be connected to a PC for function.

You can register, modify or delete: keys, users.

Reports: key withdrawal with name, date and time. Reports can be printed or can be exported for analyzing data. All the events of the cabinet are recorded in the software.

Sizes: 16-32-48-64-96-192 keys per cabinet.

Available for XP, Windows 7,8 and 10.

Integration in your company

Possibility to integrate your ERP software to simplify control from a single platform (Windows environment / MS SQL Server).
